Gymnasium

Salvation Army Kroc Center

Challenge

- Year-round use of the gym for various activities and sporting events led to high energy usage
- Monthly, and sometimes weekly, fluorescent lighting maintenance was a consistent hassle

Solution

- Design a new lighting layout to reduce the number of fixtures and associated energy usage
- Specify a long-lasting LED high bay fixture that will improve light quality and eliminate the need for constant maintenance

Improvements/Benefits

- The number of fixtures was reduced from 99 fixtures to 47 fixtures, and energy usage was cut in half.
- \$4,257 Projected Annual Savings.
- The yellow haze in the gym created by the old fluorescent lighting was replaced with clean white light that will last for years to come.

"I am very grateful not only for the new lights in our gym, but also for the meticulous planning that went into the project. Voss's attention to detail ensured that the project was completed seamlessly and within the agreed upon time frame. The transformation is truly remarkable and has made a significant impact on the overall ambiance and functionality of the space."

- Carl Larson, Head of Facilities

Bringing a better light to our world, since 1939.
